## **Crew Currency**

Crew Currency - the general view

Leon allows you to monitor crew currency: **90** days cockpit currency, **60** days singe-pilot currency, **180** days cabin crew currency and many others.

You can check the amount of currency days left to expire by simply hovering the mouse over the status-dot right next to the crew name in section Crew Duties.

To turn the feature on go to Settings > Crew Currency and mark appropriate checkboxes. You can change number of days and number of take offs/landings manually as well as insert number of block hours - to adjust this functionality to your needs. Endorsements days to expire can also be marked here.

Crew currency feature will work properly only when Journey Logs are been added to Leon and the field 'Pilot Flying' has been filled in with pilot/pilots codes. If it happens that FO did take off and CPT did landing (or vice versa), you should add crew codes in a field 'Pilot Flying' as FO/CPT or CPT/FO

Crew Currency displayed in Crew Duties roster

In a section Crew > Duties, in the filter, mark a checkbox **Show dot** - Leon will show the number of days left to expire for a particular currency if you hover the mouse over the status-dot next to the crew name.

If you have SIM duties defined by yourself in a section Duties Setup then Leon will calculate it as: 1 SIM duty = 1 landing. If you add 'Simulator' duty from the bottom of the duties list - it will show in SCHEDULE and you will be able to specify how many landing a pilot has done during 1 SIM session.
