

Flight checklist

Once the flight has been added to Leon, OPS team can start preparing it for dispatch by working on particular sectors in '**Legs Info**' screen. From 'Flights list' page you can go to 'Legs Info' screen by clicking on the dot, in the column '**Status**'. From 'Planned flights' page you can get there by editing a flight and clicking on the 'Legs Info' icon at the bottom-right corner of the window.

If the flight has more than one sector, you can edit each one of them and switch between them on the legs status edit page without going back to the flights view. It can be usefull if there is a lot of data that needs to be changed at the same time. In such case you can tick the box 'Save data after leg change' above the tabs to avoid losing stored data. If you do not mark this box, Leon will require you to click 'Update leg'.

Checklist

Basic information

Flight 123 12:00 WRO-WAW 15:00 EET: 03:00
Wroclaw(Wroclaw Strachowice/Copernicus)-Warsaw(Warsaw Frederic Chopin)

ANS (CPT) has expired endorsements:

- Medical (expired 01-01-2016)
- Insurance (not issued)
- US Visa (not issued)

Catering **CNF**

GAR sent (WRO) **N/A**

GAR sent (WAW) **N/A**

The dot on a flight list view represents the overall status of OPS & Sales checklists.

Checklist tooltip

Which tabs should be displayed inside the 'Checklist' window can be selected in Admin > Operator settings > Flight Editing tab. Some of the available sections include:

- **FPL** - Flight Plan (ATC) - all information relevant to the specific planned flight.

- **OFPL** - Operational Flight Plan, which is prepared for the crew with fuel details, point names, winds, etc.
- **A/C performance**
- **Crew aware of trip** - once the crew is assigned to the trip you can set the status to 'ACK'. If you make any changes in crew assignment for that flight, the 'Crew aware of trip' status in 'Legs Info' will turn from 'ACK' to '?'
- **Overflight permission** - in the tab 'Ops' you can either add it by clicking on 'add new permit' and choose the country from the list (recommended) or just paste it in the notes-field.
- **Landing permission** - it can be added in the same way as overflight permission (see above).
- **Airport slots** - split into 2 sections: ADEP & ADES.
- **PPR** - Prior Permit Required.
- **Ops notes** - for internal usage (do not appear on any documents).
- **Notes** - these notes will appear on the 'Trip Sheet' document.
- **Fuel** - you can add fuel prices and the amount as well as upload your own fuel prices (check tab 'Fuel' or section [Fuel Prices](#)).
- **Handling** - split into 2 sections as 'Airport slots'. For each particular airport you can choose a handling agent you wish to use (also see section [Airport Directory](#) for more information as to how to set default handling agents).
- **Crew transport** - you can specify the mode of transportation, hotel or other HOTAC details for your crew (see tab 'Crew').
- **Pax** - list of passengers, which can be added in 2 ways: text or database (you can set default pax list type in **Admin > Operator settings > General**). Pax can also be added from 'Planned Flights' page. When the number of passengers added to the flight exceeds aircraft capacity (inserted in 'Fleet edit' screen), Leon will issue a warning (see screenshot on the right).
- **Pax transport** - divided into 2 sections: ADEP & ADES transport (also can be specified from 'Planned Flights' page).

Sections directly related to Sales are separately divided in Admin > Operator settings > Flight editing*page where you can select the sales checklist statuses to be included in overall trip status.

- **Flight briefing** - details including: take-off & enroute data, aerodrome forecast or remarks.
- **Catering** - add information that will be available to your crew about pax food/drinks preferences. You can also specify different catering preferences in the [Phonebook](#).
- **Crew transport** - transport for crew from /to ADEP & ADES airport.
- **Hotel** - available in the tab 'Crew' - you can select a hotel for crew (or it can appear automatically if set as default/favourite in 'Airport Directory' screen, when editing a particular airport) and also you can mark if **breakfast, lunch or dinner** are provided.
- **Ground transport** - transport for pax from /to ADEP & ADES airport (it can be also set in 'Planned Flights' screen).
- **Contract signed** - signed by a client or a broker.
- **Invoice** - whether it has been sent and if payment is received.

All sections from the tab 'Checklist' are also available in separate tabs: Ops, Fuel, Handling, Crew, Pax, Catering and additional Flight watch, where more details can be edited. Changes in tab 'Checklist' affect other tabs and vice-versa.

Each section has its own drop down menu where, by default, the status  (untouched) is

selected (nothing was done about this item). Various sections have different options with different colours assigned.

The colour of dot on the 'Flights list' page gives you a quick information about flight preparation status.

-  - flight is ready - everything has been prepared.
-  - flight is not ready - some items are waiting to be confirmed.
-  - flight is not ready - some items require work done.
