

Flight editing

[Video Tutorial](#)

General settings

- **Default trip type** - each added trip will have a chosen type: PAX, Flight for owner, Training flight, Simulator, Technical, Ambulance, Crew private or Cargo.
- **Trip edit scheme** - allows to set PAX/Cargo or both as default values to be entered into the EDIT TRIP panel.
- **Check airport opening hours** - Leon can monitor airports opening hours and show a warning if you try to add a flight where STD/STA are outside the opening hours.
- **Include Route Finder time hint** - allows including the 'RouteFinder' flight time calculations in the 'STD' suggestion dropdown in the OPS view
- **Hide status for scheduled flights** - flight status dot will be invisible for scheduled flights in OPS section page.
- **Show max range exceeding warning** - max aircraft range can be defined in an aircraft edition page.
- **Default Trip Note** - If set, new flight is initialised with this trip note text. This text will be displayed in 'Calendar' > Trip edit > Notes section.
- **Allow not completed JL to be entered** - this option allows you to add not completed 'Journey Log' to the system (more details can be found under [Journey Log](#)).
- **Create trainings for FO** - an option to include automatically FO to trainings (online or practical ones) at airports.
- **Auto update expiry training date** - this setting will automatically update airport recency for the pilot given the checkbox "Airport recency" is marked in the Airport Directory and the journey logs are filled in correctly.
- **Enable instructors to count toward augmented crew** - if this checkbox is ticked, Leon will include 'INS' ratings towards in-flight rest FDP extension

Journey Log Item section

Journey Log Items

There is a variety of check-boxes to choose from when it comes to adjusting your [Journey Log](#) in Leon: Distance, PAX, Block fuel and many others. These can be added at any time and will update in JL immediately.

Apart from default JL items, it is also possible to set up a default fuel density for Jet A-1 and AVGAS.

OPS Checklist Items

By ticking particular check-boxes you can define what items will be available in your OPS [Checklist](#) screen by default (when adding new flights). Marking further items will NOT apply to the past flights but to new flights only, however, in OPS checklist you can click a button **Add item** and add it to

existing flights. We can extend this list with custom checklist items, if required by the operator.

Sales checklist

Same as with OPS checklist - mark appropriate checkboxes and in OPS checklist (tab Sales) they will be available. Custom sales items can also be added by request.

Custom Delay Codes - here you can define your own Delay Codes which then will be used in Journey

Custom Delay Codes	
Code 00	<input type="text" value="Late take-off"/>
Code 01	<input type="text" value="Lack of or late boarding buses"/>
Code 02	<input type="text" value="Repercussion technical problem on previous flight or other aircraft in the fleet"/>
Code 03	<input type="text" value="You can define this in operators settings page"/>
Code 04	<input type="text" value="You can define this in operators settings page"/>
Code 05	<input type="text" value="Stand-by delay code while delay code under investigation"/>

Log and Flight Watch.
