

# Flight

The screenshot shows the 'Flight' tab in the Leon software interface. The title bar at the top reads 'ABC12 D-LEON 08:00 LTN - SXF 10:00'. On the left, a vertical sidebar contains tabs: CHECKLIST, FLIGHT (highlighted in green), TRIP, CREW, PAK, WAB, FUEL, and FW & JL. The main content area is divided into several sections:

- Date:** 22 Mar 2016
- Flight No:** ABC12
- Aircraft:** D-LEON
- A/C Type:** G450
- Departure:** LTN (UTC+00:00) 08:00 Z. Below it, 'London, LONDON LUTON' and '08:00 LT'.
- Destination:** SXF (UTC+01:00) 10:00 Z. Below it, 'Berlin, BERLIN SCHOENEFELD' and '11:00 LT'.
- STA:** 10:00 Z
- Block:** 02:00
- ALTN:** CBU
- ALTN2:** EDBK
- Distance:** 514
- ICAO Type:** S
- Rule:** I-IFR
- Rest Facility:** None
- Rotation:** 01:00
- AOC:** Default
- Add tag:** A field with a red 'X' icon and the text '321'.
- OPS NOTES:** A large empty text area.
- SALES NOTES:** Another large empty text area.

At the bottom, there are three buttons: 'SAVE', 'DELETE FLIGHT' (in red), and 'CANCEL'.

Tab 'Flight' - general view

This section gives you a quick overview of flight details as well as allows you to add other properties to the flight.

In this section you can specify:

- **Date of departure**
- **Flight number** - automatically filled out if selected aircraft is configured to use specific flight number as the default one (see [Fleet](#) section). Change of aircraft will change the flight number, or will leave it blank if no Flight number specified in Fleet section.
- **Aircraft** - Aircraft registration. If you select it, aircraft type will be filled out automatically. If you change the aircraft registration, and the new aircraft has a different Flight Number assigned to it, new flight number will automatically apply to the flight.
- **A/C type** - you can select aircraft type only without specifying aircraft registration. This is useful if you know what aircraft type is going to fly a particular trip but you do not know which tail. If there is only one registration assigned to one type, this registration will apply automatically.
- **Departure/Destination** - Airports of Departure and Destination. Leon also displays name of an airport, city and timezone.
- **STD/STA** - Scheduled times of departure and arrival. STA can be calculated by Leon if relevant field are filled in [Fleet](#) section. Clicking in Z/LT converts times respectively from UTC to LT and vice versa.
- **Distance** - Leon suggests the distance in NM.
- **ICAO Type** - (ICAO flight plan type). This is one letter code according to ICAO: S-scheduled, N-

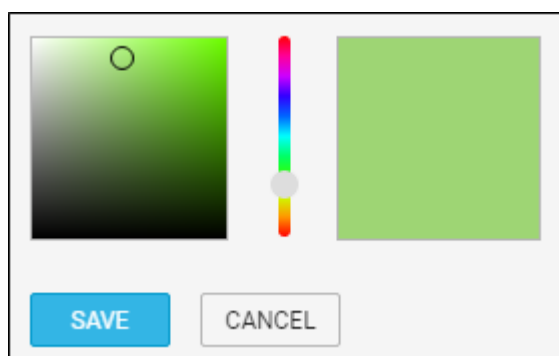

non-scheduled, G-general, X-other.

- **Rest facility** - three options to choose from: N-None, A-Adequate (seat), S-Suitable (bunk). Rest facility will apply automatically if defined for each aircraft in [Fleet](#) section.
- **Add tag** - possibility to tag particular flights.

To tag a flight you need to enter a tag's name or a tag's symbol.

It's also possible to select a colour for each single tag (slide with a button to choose it). If you want to filter flight by a particular tag you can do that in right-hand filter (tab MORE, a field Tags).

There are also two fields to add notes for OPS Department and Sales Department. These two fields are for internal use only. Information added in **OPS Notes** will show in the Trip Sheet.
