

Journey Log

Journey Log is the post flight information which you can input to Leon after performing the flight.

Before inserting a Journey Log, you can use **Flight Watch** to monitor flight progress. You can read more about it under a [separate section](#) of this manual.

Completed Journey Log

Journey Log includes all actual summary data regarding the realisation of the flight. It might differ from the values adopted for the flight during planning and include some additional information, such as: Delay code, CMT, Pax, Bags, etc...

Many fields in Journey Log are customisable and can be set individually for each operator.

When a trip is added to Leon, in the [Flights List](#) screen, a blue plus icon appears . By clicking it you have a possibility to enter all the executed times along with the additional information. Most of the data saved in Journey Log is used in all kinds of reports in Leon.

Completed Journey Log

In case saving incomplete Journey Log, the system will show a warning: "Please fill out all required fields".

There are **2** kinds of information that need to be entered to Journey Log before saving it:

- Flight times - BLOFF, T/O, LDG, BLON.
- Fuel - fields 'Used fuel' and 'Block fuel' are mandatory to be filled in. When leaving 'Used fuel' unfilled, the warning: "Set valid 'Used Fuel' value" will come up. When 'Block fuel' is either left blank or its value is lower than 'Used fuel', the warning: "Block Fuel value cannot be lesser than Used Fuel".

Not completed Journey Log

It is possible to save a Journey Log without some data inserted into it.

In the Flight editing section of [Operator Settings](#) you need to mark a checkbox '**Allow not completed JL to be entered**' and save.
