My Schedule

This panel shows assigned flights, positionings, office duties, standby duties, training - including duties added in the roster, such as: holiday, day off, sick, etc...

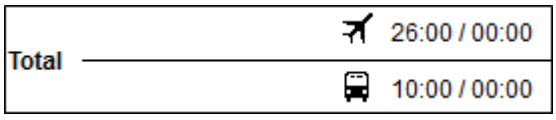

In the filter, you need to select a period of time. You can also set times to be displayed in UTC, Base LT (defined in Crew profile) or LT (local time of ADEP & ADES). You can also show aircraft registration right below aircraft type or show crew on PAD position.

My Schedule - a spreadsheet with all crew flights, positionings and roster duties

The screen shows data such as:

- **Crew code/name & period of time** - on top of the page
- **Day of the week**
- **Aircraft type/registration**
- **Duty description** - duty type, schedule, airport codes
- **Function** - CPT, FO, etc...
- **Crew** - all assigned crew codes
- **Block/CMT** - block time/commercial time (which can be inserted to the Journey Log) - an option to view CMT in **decimal** is available to be switched on in the filter.

At the bottom you can find summary of the block time done by a particular crew member:

The screen can be exported to PDF file, but it is also possible to click on **All to PDF** in the filter - it means that all crew members would get exported to PDF.
