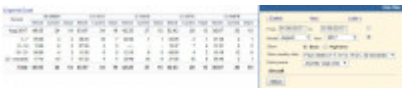
Aircraft Block Time by Month



Report 'Aircraft Block Time by Month' - fleet monthly block/flight time & cycles

In this report you can view **cumulative block time or flight time** (depending what you select in the filter) along with the number of **cycles** and flying days for all aircraft.

A drop-down box **Show weekly data** allows to generate data in 3 different formats:

- **Month only** - block time, cycles & days show total monthly value per an aircraft.
- **Calendar weeks** - data divided into calendar weeks (Monday - Sunday).
- **Four weeks** - data divided into 4 periods: days 1-7, 8-14, 15-21, 22-onwards.

It is possible to export data to **Excel**, select a particular aircraft and change data source.
