

# Crew Currency Summary

The screenshot shows a software interface with a table. The table has several columns, including 'Base Name', 'Name', and multiple 'Currency' columns. The rows represent crew members, and the cells in the currency columns are color-coded: green for 'valid', yellow for 'within 30 days from the expiry', and red for 'expired'. Some cells are empty, representing 'N/A'.

'Crew Currency Summary' report

'Crew Currency Summary' report, as the name indicates, displays the summary of currencies of all crew members.

In the report, the crew are grouped by the assigned user base.

The report contains the following columns:

- **Base Name** - 'User Base' assigned in the full user profile
- **Name** - name of the crew member
- **Currency columns** - number of columns displayed depend on the number of selected currencies in the ['Crew Currency'](#) section

The **currency columns** contain information about the aircraft type, the date of expiry, and the status indicated by the colour: **valid**, **within 30 days from the expiry**, **expired**, and 'N/A' (appears if the currency doesn't apply to the crew member).

It is possible to **filter** by the crew member and the tag/label assigned to the crew in the crew profile.

It is possible to **export the report to an excel file**.
