Delays / On time

Report 'Delays / On Time' - a list of all delayed flights

Flights do get **delayed** from time to time. Whether it's because of technical problems with the aircraft, documentation issues or check-in error - OPS department need to record it in flight documents.

In Leon you can add a delay code & time to your **Flight Watch** or **Journey Log**. Delay code and the delay time can be inserted (the format: code/delay i.e. 14/0010 where 0010 means 00:10 minutes) - if added to FW Leon shows **D** in OPS, column FW&JL.

Then you can generate a report which shows all delayed flights in a selected period of time in the filter.

You can filter flights by a flight code or a flight tag. You can also insert airport code (click 'more' to add both ADEP & ADES codes), select the length of the delay, search by a particular delay code or delay mode.

The report is divided into **4** sections:

1. Total - all legs with Journey Log, delays under 15 min, delays over 15 min, legs on time.
2. By aircraft - separate verses represent tails.
3. By route - data divided into delayed routes.
4. Delay codes - all delay codes inserted to Journey Logs.
