FAA CARI-6

FAA CARI-6 is a computer program that allows you to precisely calculate the **cosmic radiation dose**.

Report FAA CARI-6 for cosmic radiation calculations

This program can be downloaded by using this link. Once it's saved and unpacked, read a file **Readme** where there are actions described step by step you should take.

To calculate cosmic radiation dose for Leon flights, export them from this page and use it as CARI-6 input file.

Be aware that for precise calculation CARI-6 needs **actual heliocentric potencial** that can be obtained here

The heliocentric potential enables the program to adjust for changes in galactic radiation levels that occur with changes in solar activity.

[This functionality is for Windows users only]
