Personal Flights List

Report 'Personal Flights List' - crew flights & other duties

With this report you can generate a **list of all flights** performed by a particular crew member in a selected period of time. Apart from **flights details**, such as: <u>date, acft, flight no., flight times</u> - this report also shows useful data: <u>night time, number of landings, CMT (commercial time), COM surname and FDP time</u>.

In the filter you also have a **Timezone** option which allows you to switch between UTC, LT, Base Time and Selected Person Base Time

CMT column will only display if the CMT item is added to the default JL elements in 'Flight editing' section.

Below the list of flights you can find a **summary** table where total block time, CMT and the currency is split per aircraft type and the flown position.

In the filter you can mark **additional checkboxes**, such as: flights as observer, positionings, options or particular trip type. It is also possible to export **all crew flights to pdf**.
