

# International & Domestic Flights

A screenshot of a web application showing a table of flight data. The table has columns for flight number, origin, destination, and status. A small dialog box is open in the top right corner, allowing users to filter the data by various criteria.

Breakdown of international and domestic flights in a selected period of time

This report allows to have a list of domestic and international flights in various combinations, in a given time period. You can filter the data by various factors. Available combinations of the filter are as follows:

- **Traffic: \*; Country: \*** - all flights visible
- Traffic: domestic; Country: \* - all flights in a single (any) country
- Traffic: domestic; Country: Poland - all flights taking place in selected country only (in this example - Poland)
- Traffic: international; Country: \* - flights where ADEP is in a different country than ADES
- Traffic: international; Country: Poland - flights where ADEP is in a different country than ADES and one of the airports is in the selected country (in this example - Poland)
- Traffic: \*; Country: Poland - all flights where either airport belongs to the selected country

When you hover the mouse over the route, a tooltip with a full trip will show given the other legs in the trip do not meet the filter criteria.

The report includes both confirmed and not confirmed flights.
