TLB - Technical Log Book

TLB - Technical Log Book is a section where you can add exact **TOFF** & **LNDG** times along with the number of cycles done by particular aircraft in the trip.

The data inserted here can be used for **TAH** (Total Aircraft Hours) & **TAC** (Total Aircraft Cycles) calculations (if a checkbox 'Calculate TAH, TAC using TLB' is marked in 'Admin > Operator Settings'). The calculation is then displayed in 'Admin > Fleet' page.

In the filter it is possible to sort data by a TLB number or by time.
