PRIVILEGES - New Approach to Aircraft Access for Crews

Significant changes have been implemented in how access to aircraft is determined for crew members within the same 'Privileges' group. These modifications will significantly improve safety by enabling operators to reduce the number of crew 'Privileges' groups and minimize the number of individuals requiring 'System Administrator' access.

On the 'Privileges' group's > 'AIRCRAFT' tab, you'll find a new switch 'Aircraft List', offering two options:

- **Fixed** - this option enables keeping the previous approach of assigning aircraft access for crew members by selecting checkboxes corresponding to the specific aircraft tails

- **Aircraft preferred crew** - this option enables granting access to the crew members for specific aircraft tails based on their assignments as 'Preferred Crew', which is managed in the 'Fleet' section under the 'Crew' tab. By choosing this crew members will have only privileged access to those tails where they are set as 'Preferred Crew'
