## **CREW CALENDAR**

New features have been introduced in Crew Calendar.

## Additional filtering options

	_
Filter by Aircraft tail & label	

Additional filtering crew options in the Crew Calendar panel has been implemented.

It is now possible to filter out crew by **Aircraft registration** and/or **Aircraft labels** assigned to particular aircraft tails.

In section **Fleet** edit aircraft profile, under tab **Basic**, it is possible to assign labels to aircraft tail. Under tab **Crew** of the same section, it is also possible to assign specific crew members who have ratings on that particular type. If this is done, Crew Calendar **Filter** pop-up window allows to filter out crew either by Aircraft Registration and/or by specific Aircraft labels. This is especially useful for operators with a larger fleet as the same label can be assigned to more than one aircraft tail hence it is not necessary to select all aircraft registrations in the filter.

## **Cloning duties using resize feature**

It is possible to clone duties in Crew Calendar by simply resizing the selected duty.

In order to do that, simply left-click on the duty until you see the 'resize' icon. Still holding the left key of the mouse, move it to the left/right and cover the calendar tiles to which the duty should be cloned. Once the mouse button is released the duty should clone to marked calendar tiles.

If the cloned duty overlaps already-existing duty, this duty will be overwritten with the new duty.

This feature works both in draft mode as well as in the actual mode.
