

Improvement of the Crew Panel

We have introduced new functions in Crew Panel:

Crew Panel updated view

- **Sort by leg** - you can sort the crew by flight in the Crew Section of the Panel. This can be done in 2 ways, by either clicking on the flight and pressing 's', or by clicking on the flight with the right-click of the mouse and choosing 'Sort by leg' from the available menu. Once that's done the Crew section will display the duty of the crew assigned to this flight.
- **Tooltip with Crew contact details** - hovering the mouse over a **sector** will display Crew assigned including the contact details (email and the telephone number). Hovering the mouse over the **crew code** in the Crew section will also display the contact details.
- **Created/Updated** - hover the mouse over the duty and Leon will show an information: Created by (name/surname, code, date & time), Updated by (name/surname, code, date & time).
- **Flight colours** - in the Flight section of the Crew Panel we have introduced the colour marking of the flights:

123 is for the full set of crew.

128 is for the partially assigned crew or none.

- **Maintenance** - scheduled maintenance can be seen in the Flight section. This can be removed by unticking 'Maintenance' checkbox in the 'SHOW' part of the filter.
- **Dim ferry legs** - this option is also located in the tab 'SHOW' in the filter.
- **Crew ratings** - displayed the highest rating right next to the crew code.

It is very important to us that at this stage you, as an experienced Crew Planner, provide us with a feedback regarding the functionality. What do you think about the 'Crew Panel' interface? Does editing per-day is intuitive for you, or do you find this view working in some hard to predict manner? Please send any feedback to support@leonsoftware.com
