

BASE & TOTAL types of FUEL PRICES

Different operators want to show fuel prices either as **Base price** (excluding tax), or **Total price** (including tax). Meeting this request, we have added an option to define a **default fuel price**, as well as viewing these prices in a panel 'Fuel Prices' and switching between BASE & Total price type in a section OPS.

DEFINING DEFAULT FUEL PRICE TYPE

Go to a section 'Settings' and in 'General Settings' panel define a default fuel price - click a drop-down **Default price type for fuel prices** and select between **total** and **base**, then save.

Fuel prices - presenting Base & Total fuel prices types

Section FUEL PRICES

We have also replaced a column 'Price' in a section OPS > Fuel Prices with **2 separate columns**: Base Price & Total Price. It is possible to select different fuel units (GAL, L or T) to each column - as long as an uploaded fuel file contains 2 types of the price. If a fuel file has only 1 fuel price, Leon will show **0** in Fuel Prices page in the column price that is missing in the file (see screenshot on the right).

Section OPS

It is also possible to **switch between Base & Total fuel price** in a section OPS, tab **FUEL**. Right in top-right corner of the screen you can find a switcher **BASE TOTAL** to view a proper type of the fuel price.

The price with the marked checkbox 'Show on Crew Tripsheet' will show on this document, in a section **Fuel Info**.
