COUNTRY TAX RATES FILE

When uploading fuel prices files to Leon, not all of them contain of both: 'Base' (excluding taxes) and 'Total' price (including taxes). To make possible viewing both fuel prices in panels: Fuel Prices & OPS > tab FUEL, we have made possible uploading a file with **Country tax rates**.

A file itself needs to be created as per a format below - only 2 columns are needed: **Country** and **Total Taxes**.

A column 'Country' can have inserted either country name (Argentina), country code (ARG) or iso code (AR).
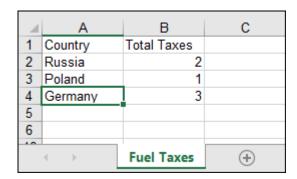

A value from 'Total Taxes' column will update fuel prices for airports of a country from this file:

- **Total price** = 'Base price' multiplied by 'Total Taxes' value.
- **Base price** = 'Total price' divided by 'Total Taxes' value.
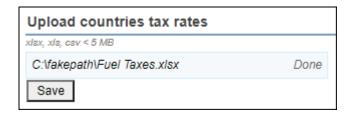

What's important is that inside the file, the sheet's name must be 'Fuel Taxes', otherwise it will not work.

Country tax rates from uploaded file

Once the file is ready, go to **OPS > Fuel Prices** panel and use an uploader **Upload countries tax rates**.

Uploaded fuel taxes will show on the main 'Fuel Prices' page in a column **Country tax rate** (see screenshot on the right).

In a panel OPS, tab FUEL, if you switch between 'BASE' & 'TOTAL', Leon will show prices accordingly, as per an example below: tax rate for Germany has been defined to '3' and Leon shows 'Total' price

as 'Base' price multiplied by '3'.

BERLIN (BER) ➕			BASE TOTAL
Provider	Supplier		Action
Everest Fuel	GERMAN FUEL SERVICE		
	Price per L: 0,3913 USD		ORDER
	Show on Crew Tripsheet: ☐		

BERLIN (BER) ➕			BASE TOTAL
Provider	Supplier		Action
Everest Fuel	GERMAN FUEL SERVICE		
	Price per L: 1,174 USD		ORDER
	Show on Crew Tripsheet: ☐		

If the fuel file uploaded to Leon already contained both prices: 'Base' & 'Total', Leon will not update them.
