

From the **1st of August** we have introduced an important change to Leon - we have replaced '**operation**' with '**trip**' and we have removed the option '**Split/Merge**'. Now Sales dept can add entire trip regardless if it's during one day or more. Then OPS dept do not have to split or merge it.

The main reasons why we have done it were:

- **1** - this update will make **easier** for the Sales depts to enter trips (now they can add multiple legs on different days).
- **2** - OPS dept **does not** need to split or merge the trip in order to sort it on the flights list screen or to print documents.
- **3** - this will allow us to introduce a new Sales module in new version of Leon.
- **4** - to **normalise** both applications: current and the new one.

Generally, the '**Split/Merge**' feature was a sort of stiltedly option to "correct" further OPS dept actions in Leon, such as printing documents not for the entire trip but for a particular flight (if i.e. the flight was for a different client).

In the 'Flights List' filter there is no need to filter flights by operations or legs. From now on you can select in the filter **one of three options**:

- **None** - flights are not grouped, they are displayed chronologically.

The screenshot shows the 'Flights List' interface. The flight list is sorted by date, with flights for 01-08, 02-08, 03-08, 04-08, 05-08, 06-08, 07-08, and 08-08. A yellow callout box points to the flight list with the text 'Flights are not grouped - they appear chronologically'. The right sidebar shows the 'split/merge info' filter with 'Group by' set to 'None'.

- **A/C Reg** - grouping flights by the aircraft registration (on the particular day next to each other - it's easy to mark for what flight you want to print documents).

The screenshot shows the 'Flights List' interface. The flight list is sorted by aircraft registration, with flights for 01-08, 02-08, 03-08, 04-08, 05-08, 06-08, 07-08, and 08-08. A yellow callout box points to the flight list with the text 'Flights grouped by aircraft registration, regardless STD'. The right sidebar shows the 'split/merge info' filter with 'Group by' set to 'A/C Reg'.
