

AMOS export

A screenshot of a web application showing a table of flight data. The table has multiple columns, including flight numbers, dates, and aircraft registrations. The data is organized in a grid format with alternating row colors for readability.

'AMOS export' report

AMOS is the MRO software used by airlines. More information about AMOS can be found [here](#)

The report allows downloading an XML file and uploading it to the AMOS' FTP servers.

The report contains the list of completed flights with Journey Log filled in (can be a partial Journey Log, ie timeframes inserted).

Additionally, it is possible to filter by the date range and the aircraft registration. The filter is located in the top-right corner of the screen.

In order to download the file, click on the [Executed flights](#) link available in the top-left corner of the report.

This is the first step of the integration with AMOS. The report will be furtherly developed.
