

# Calendar view

Invalid Link

Flight activities in a calendar view

Possibility to switch from the **Flights List** section to **Calendar** gives you a wider view on your flights. The advantage of the calendar panel is that you never lose your fleet from sight when you change the date.

Click on the **Calendar** icon to enable the view. Set the start date in the calendar and use black arrows to navigate.

## Fleet activities appearance

Colours of flights correspond with the **Planned Flights** in Leon 2.0

### Confirmed flights

### Options

### Maintenance

### Reservation

### No crew reservation

---

If there is an **airport discontinuity** between 2 airports, ADEP of another flight is marked in yellow and if you hover the mouse over the flight a pop-up window shows up with the information.

If you edit a leg which is a part of multi-sectors trip (orange frame), Leon will highlight all legs of the trip as well (grey frame).

After clicking a particular flight/option in the right-hand side filter Leon displays the schedule details.

You can use the **filter > tab 'More'** (on the left hand side of the screen) to narrow down the amount of data displayed, or to view more information, such as:

1. **Airport category** (if different to 'A') -
2. **Ops/Sales status** - mark checkboxes to get the status dot/dots displayed:
3. **Crew changes** - if the crew has been changed on the flight, an indication will be displayed right below STD time. If you hover the mouse over the flight, a pop-up window will show up with the crew change information. If either **airport continuity** or **FTL** is incorrect, the icon will become red.
