

Updates in OPS

We have introduced following updates to OPS section:

1. 'Ambulance' flights indication

If the flight is added as Ambulance it will display in the PAX column in the TABLE view or in the tail in CALENDAR view as 'Ambulance'.

In addition, if passengers are added to Ambulance flight the number of PAX will be displayed in brackets, i.e 'Ambulance(2)' for Ambulance type flights with 2 PAX.

2. Additional Fuel conversion format

We have added an option to convert fuel units using **density** format **QuantityUnit@numberD** where 'D' stands for density and 'number' for density value.

The exemplary format is 3000L@0.668D which giveskg. This can be used with 'L' as well as two other fuel units - **USGAL** and **UKGAL**.

Once inserted it will automatically convert to the default unit of the JL (kg or lbs)

3. Changes to Cargo value input

4. Rotation prognosis in TIMELINE
