

# SIFL Report

Leon will share with all operators a new report: **The Standard Industry Fare Level (SIFL)**. The report will be available on the main Report Wizard page, in a section 'Reports shared by Leon'.

Reports shared by Leon	Scope	Category	Last modified
SIFL Report	PAX Flight	Custom	28 Nov 2023 15:36

Report SIFL - setting up calculation

The report is used to calculate the taxable benefit of personal use of company aircraft by an employee.

To make this report show data, when adding PAX to the flight, mark whether SIFL should be calculated by marking a checkbox in **PAX details** (in a tab PAX of the OPS panel). Also, make sure that the **Host** is selected in the same window (see screenshot on the right).

In the PAX profile, tab 'Details', you can select the **SIFL employee status**: control or non-control.

The **formula** used in this report is as below:

**SIFL = [(Mile \$ x (Aircraft Multiplier) = Terminal Charge] x PAX number**

SIFL **rates** are:

0-500 miles > 0.2654 \$ 501-1500 miles > 0.2024 \$ over 1500 miles > 0.1946 \$ Terminal charge > 48.53 \$

A screenshot of an example SIFL report. The top section shows flight details for a specific date, including PAX names, flight times, and distances. The bottom section shows a table of aircraft multipliers and the calculated SIFL rates for different distance ranges.

SIFL report example

The screenshot on the right shows an **example** of SIFL report.

The upper part shows PAX information: date of the trip, PAX names (incl. host), Flight time, miles and the cost.

The lower part shows the aircraft multiples and the rates.
