

Indication of the final price change

Indication of the final price change is introduced.

The indication **applies when the final price is amended after sending the quote** to the Client (status 'QUOTE') **or after booking the request** (status 'BOOK').

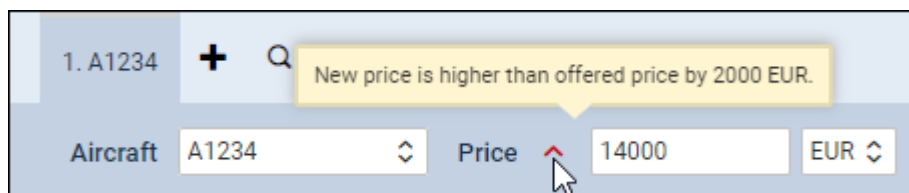

There are **three possible scenarios**:

1. Price remains unchanged - no indication

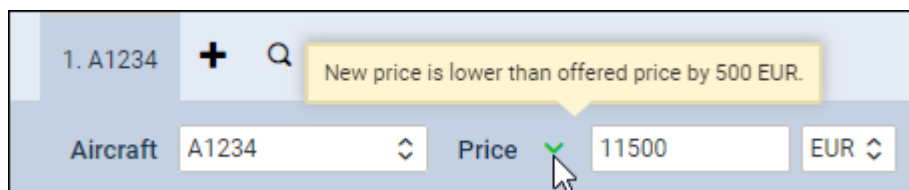

The screenshot shows a form with a header bar containing '1. A1234', a plus icon, and a search icon. Below the header, there are two input fields: 'Aircraft' with the value 'A1234' and 'Price' with the value '12000'. To the right of the 'Price' field is a currency selector set to 'EUR'.

2. Price increased - indicated by the red arrow. Hovering the mouse over the arrow displays the value by which the price was increased.

The screenshot shows the same form as before, but the 'Price' field now contains '14000'. A red upward-pointing arrow is positioned between the 'Price' label and the input field. A yellow tooltip box is displayed above the arrow, containing the text: 'New price is higher than offered price by 2000 EUR.' A mouse cursor is hovering over the red arrow.

3. Price reduced - indicated by the green arrow. Hovering the mouse over the arrow displays the value by which the price was reduced.

The screenshot shows the same form as before, but the 'Price' field now contains '11500'. A green downward-pointing arrow is positioned between the 'Price' label and the input field. A yellow tooltip box is displayed above the arrow, containing the text: 'New price is lower than offered price by 500 EUR.' A mouse cursor is hovering over the green arrow.

Leon checks the price change in two stages:

- **Quoted** - the final price change is checked against the offered price (price quoted).
- **Booked** - once the trip is booked, the final price is checked against the booked price (booked price).

Additionally, the following **columns are added to the scope 'Quote'**:

- **Quote price when quoted** - indicates quoted price.
- **Quote price when booked** - indicates booked price.
