Notes

Flight Watch data entrance

We have added a new field **EET** - Estimated Endroute Time - in the Flight Watch.

The logic behind adding that field is that the values **T/O + EET** should always give **ETA** (which should be filled in automatically).

Example

A flight ABC STD-08:00 PRG - ATH STA-10:20

T/O - 08:10 EET - 02:10 (the value input here should be the estimated lenght of the route) ETA - 10:30

If inserted ETA differs to T/O + EET Leon will show a warning:

You can also fill in ETA and Leon will calculate EET automatically.
