

SSIM FILE EXPORT

SSIM configuration page

The **DCS** and **PSS** sections of SSIM Configuration have been expanded and it is now possible to select what trip types should be exported to DCS and/or PSS systems.

Under **Flights** section it is possible to select how many days ahead should the flights be sent out.

After each schedule change of the published flights in panel **SCHED**, the system will send out only those selected **ICAO** and **trip type** flights.

The **Delivery** section allows to configure FTP Host. Once this is done Leon will automatically download SSIM files to FTP Servers.
