3 take-offs and 3 landings in the preceding 90 days

According to OPS 1.970 a pilot should carry out **3 take-offs and three landings in the previous 90 days** as pilot flying in an aeroplane, or in a flight simulator of the same type/class.

An example below will explain how this feature works.

Crew **TAR** has carried **3 take-offs and 3 landings in previous 90 days**.

Go to `Crew > Duties` section and right next to pilot's code you will see **status-dots** displayed.

Information inside the status-dot shows, that 54 days left to expire '90 days currency' (hover your mouse over it to bring a pop-up window) - here is how it was calculated:

- the latest take-off/landing was on **01-09**
- 90 days expiration period will be on **29-11**
- the date of checking is **07-10**
- between 07-10 and 29-11 there is **54 days** (including the 7th of October and the 29th of November).

1 night landing in the preceding 90 days

According to OPS 1.970 a pilot should carry out **at least 1 landing at night in the preceding 90 days** as pilot flying in an aeroplane, or in a flight simulator, of the same type/class.

Night landings feature works analogously to the one above (see example below).

Crew **TAR** has carried at least **1 night landing within last 90 days**. The status in 'Crew-Duties' section will inform you in how many days he would need to carry another night landing duty.

The calculation goes as follow:

- the latest night landing was carried on **02-10**
- 90 days expiration period will be on **31-12**
- the date of checking is **07-10**
- between 07-10 and 31-12 there is **85 days** (including the 7th of October and the 31th of December).

If a pilot **has not carried 3 take-offs and landings within 90 days**, when hovering the mouse over the status-dot, the information will be displayed as '**0**' days left. If the number between the latest

take-off/landing and the current date (date of checking) is **lower than 30** - the dot will become **orange**. The same applies to **night landing** status.

IMPORTANT INFORMATION !

**'90 days currency' & 'Night currency'
feature will work only when 'Journey Log'
has been added to Leon and the field
'Flown by' has been filled in**

**The colour of the status-dot depends on
settings of the filter. Section 'Cockpit crew
status' has 3 checkboxes to be ticked: 90
days currency, night landings and
endorsements required for dispatch -
unticked option/options will not affect the
colour of the status-dot**
