

Cockpit crew status

- **90 days currency**

According to OPS 1.970 a pilot should carry out **3 take-offs and 3 landings in the previous 90 days** as pilot flying in an aeroplane, or in a flight simulator of the same type/class.

IMPORTANT INFORMATION !

'90 days currency' feature will work only when 'Journey Log' has been added to Leon and the field 'Flown by' has been filled in

An example below will explain how this feature works.

Crew **TAR** has carried **3 take-offs and 3 landings in previous 90 days on 2 types of aircraft.**

Go to Crew > Duties section - right next to pilot's code there is a status-dot. Hover the mouse over the dot to get the information displayed in the pop-up window. In case of crew **TAR** it shows, that **51** days left to expire '90 days currency' for aircraft **G450** and **81** days for aircraft **H750** - here is how it was calculated:

G450

- the latest take-off/landing was on **01-09**
- 90 days expiration period will be on **29-11**
- the date of checking is **10-10**
- between 10-10 and 29-11 there is **51 days** (including the 10th of October and the 29th of November).

H750

- the latest take-off/landing was on **01-10**
- 90 days expiration period will be on **29-12**
- the date of checking is **10-10**
- between 10-10 and 29-12 there is **81 days** (including the 10th of October and the 29th of December).

If a pilot **has not carried 3 take-offs and landings within 90 days**, when hovering the mouse over the status-dot, the information will be displayed as '**0**' days left. If the number between the latest take-off/landing and the current date (date of checking) is **lower than 30** - the dot will become **orange**. The same applies to **night landing** status.

The colour of the status-dot depends on the settings of the filter. Section 'Cockpit crew status' has 3 checkboxes to be ticked: 90 days currency, night landings and endorsements required for dispatch - unticked option/options will not affect the colour of the status-dot
