# MVT Messages

This module allows to set up **Movement Emails** for each aircraft. You can define **templates** as well as add new templates. When Flight Watch data arrives to Leon a movement email will be sent out to the recipient.

For each teamplate you can input its name, subject and template's text. **Tags** available in the **Legend** can be used so that the movement email contained all necessary information.

Templates

Aircraft Movement Templates

There are 8 available default templates which can be modified. It is also possible to define your own templates.

A screenshot below shows an example of the **Take Off** template's text. In order to add a new template click **+** and add details such as:

- **Template's name** - i.e. "Aircraft owner movement email".
- **Subject** - i.e. "Takeoff movement for (Aircraft registration number)".
- **Template** - the text should contain tags available in Legend.

Dear Sirs,

We wish to inform you that the aircraft {{REG}} on flight no {{FLIGHT}} from {{ADEP_NAME}} {{ADEP_IATA}} to {{ADES_NAME}} ({{ADES_IATA}}) has taken off at {{TO}}.
{{#ETA}} Aircraft is scheduled to arrive to {{ADES_NAME}} {{ADES_IATA}} at {{ETA}}.{{/ETA}}
{{#PAX}}Aircraft has {{PAX}} passengers on board.{{/PAX}}

Once the **Flight Watch** data is filled in an email for the above template would be as on the example below:

"Dear Sirs,

We wish to inform you that the aircraft B-ARTI on flight no BAR21 from WARSAW FREDERIC CHOPIN WAW to GENEVA INTERNATIONAL (GVA) has taken off at 07:15. Aircraft is scheduled to arrive to

GENEVA INTERNATIONAL GVA at 09:45. Aircraft has 23 passengers on board."

Rules

Defining take off & landing rules for the aircraft

By clicking on a particular aircraft in a section **Fleet Rules** Leon opens a new screen where you can select **Scenario** (Take off, Landing, Aircraft ready, ETA update) and **Template** (select between those defined on the right-hand side).

You can also insert a recipient's email address as well as CC & BCC email addresses - this should be done for both: take off & landing MVT emails.

Each Rule has **Client** checkbox available which will allow you to include Client in relevant MVT email.

A button **ADD RULE** allows to add custom rules (i.e. a separate rule for a client).

Legend

The legend contains **Tags** and right next to them their description plus **Test Data** column showing examples (see below).

```
     TAG                DESCRIPTION           TEST DATA
{{ADEP_ICAO}} Airport of departure (ICAO)     EPWA
```

> When defining templates you should use tags displayed in Legend only. In case you need an additional tag, please contact support@leonsoftware.com
