

In MX > TLB section we have added a new option **Configuration**.

This is the first step to using TLB. Here you can input start values for **TAH** and **TAC** calculations for each Aircraft. These values will show in tab CAM, column Airframe.

Registration	TAH	TAC
M-NOEL	<input type="text" value="1000:00"/>	<input type="text" value="785"/>
D-LEON	500:00	100
G-LEON	337:25	87
H-LEON	100:00	30

Once you have configured the aircraft you can start inputting data by **Adding new TLB entry**. The data inserted here can be used for **TAH** (Total Aircraft Hours) & **TAC** (Total Aircraft Cycles) calculations **but only** if a checkbox 'Calculate TAH, TAC using TLB' is marked in 'Admin panel > General Settings'). The calculation is then displayed in 'Admin panel > Fleet' page.

When adding new Maintenance, you will be able to check TLB Limits for the day of the Maintenance, by clicking **Check** button and it will display as per below screenshot.

CAM limits			<input type="button" value="check"/>
TAH	<input type="text"/>	TAC	<input type="text"/>
Date <input type="text"/>			
Current on 30-04-2016 at 01:00			
Only confirmed flights:			
TAH	650:28	TAC	255
All flights (including options):			
TAH	654:58	TAC	258
