

Two-factor authentication

Be sure it's you

CyberSecMonth is a great moment to talk about the features in LeonSoftware that provide more security for you and your company.

Two-factor authentication is exactly such a feature. Together with google authenticator it generates a personal code on your mobile device.

This allows to decrease a possibility of unauthorized access as having your credentials like a login and personal password is not enough. This functionality generates a unique personal code on your mobile device at every login.
